

AI Code Reviewer Report

File: bill.py

Language: Python

Score: 80

Bugs Found: 1

Suggestions: 2

AI Review

The code does not handle invalid inputs and does not follow best practices for variable naming and comments

Original Code

```
units = int(input())

if units <= 100:
    bill = units * 1
elif units <= 200:
    bill = 100*1 + (units-100)*2
else:
    bill = 100*1 + 100*2 + (units-200)*3

print("Bill =", bill)
```

AI Corrected Code

```
units = int(input('Enter the number of units: '))

if units < 0:
    print('Invalid input. Units cannot be negative.')
else:
    if units <= 100:
        bill = units * 1
    elif units <= 200:
        bill = 100*1 + (units-100)*2
    else:
        bill = 100*1 + 100*2 + (units-200)*3

print('Bill =', bill)
```
