

# AI Code Reviewer Report

**File:** calculator.py

**Language:** Python

**Score:** 80

**Bugs Found:** 2

**Suggestions:** 1

## AI Review

The code does not handle division by zero and does not validate the operator input properly

## Original Code

```
a = int(input())
b = int(input())
op = input("Enter operator: ")

if op == "+":
    print(a+b)
elif op == "-":
    print(a-b)
elif op == "*":
    print(a*b)
elif op == "/":
    print(a/b)
else:
    print("Invalid operator")
```

## AI Corrected Code

```
a = int(input())
b = int(input())
op = input("Enter operator: ")

if op == "+":
    print(a+b)
elif op == "-":
    print(a-b)
elif op == "*":
    print(a*b)
elif op == "/":
    if b != 0:
        print(a/b)
    else:
        print("Error: Division by zero")
else:
    print("Invalid operator")
```
