AI Review

The provided HTML code seems mostly correct, but there are a few potential issues. The 'url_for' function in the form action suggests that this is a template being used in a framework like Flask, but the syntax is not standard HTML. Additionally, the 'praveen@gmail.com' email is hardcoded into the email input field, which may not be desirable for a real-world application. It would be better to leave this field blank or use a placeholder.

Original Code

```
<!DOCTYPE html>■
